

Pak Tourism – Tourism App

(Tourism app)

Readme/Abstract:

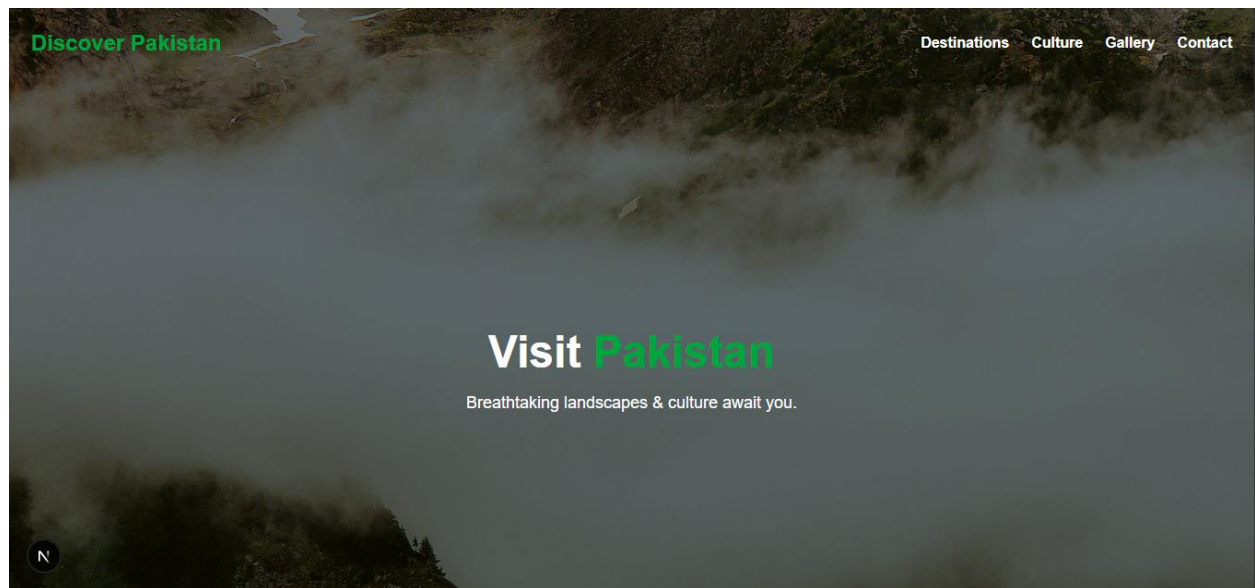

This project is a **single-page tourism web application** designed to promote Pakistan's culture, destinations, and hospitality through an engaging and user-friendly interface. The platform consists of four core sections: **Culture, Destinations, Pakistan Gallery, and Contact**. The Culture section showcases the country's rich heritage, while the Gallery highlights visual experiences of landscapes and landmarks. The Destinations section provides city-wise exploration, where users can view available hotels and proceed with bookings by entering their details. Upon confirmation, the system generates a receipt displaying hotel information, booking details, and location. The Contact section ensures easy communication and accessibility for users. With its seamless navigation, visually appealing design, and functional booking workflow, this project delivers an intuitive digital experience that encourages users to explore and engage with Pakistan's tourism potential.

Technologies used:

- Next.JS (react.js library)
- React.JS (js framework)
- Tailwind CSS for styling (css library)
- Framer Motion for animations
- React-Hook-Form for details by user
- Next.JS for making website SEO-friendly
- Git & Github for storing code as backup
- Vercel to deploy project on real browser.
